1. Introduction
International agreements have declared trafficking in human beings a crime and much work has been done on different plans to prevent and punish it as well as to assist victims, which are disproportionately females. Trafficking happens across all time periods and locations; however, it is trafficking in times of crisis which requires particular attention in the global landscape of mounting conflicts. This paper looks into human trafficking with a clear focus on the situation of women and girls within the humanitarian response to the Syrian crisis. Based on recent reports on trafficking in crisis from international organizations (IO), it will identify potential strategies to incorporate recommendations of the reports to the work of humanitarian workers in the field, based on a case study of the International Organization for Migration (IOM).

The aim of this paper thus is to answer the following question: How can recent recommendations on human trafficking in crisis zones be applied by humanitarian workers with a gender perspective to the case of Trafficking in Persons (TiP) within the Syrian crisis?

1.1. Methodology
Relevant literature, as well as United Nations (UN) Resolutions, international agreements and IO reports have been reviewed in order to devise a framework for further studies. Recent reports from the field have been considered and four key recommendations have been selected. Specific strategies and indicators have been developed to implement these strategies (see Appendix B). Additionally, advice and information from the Counter-Trafficking Focal Point of the IOM Country Office for Austria and from other IOM offices has also been included. This particularly enriched the understanding of current and past practices in the field as well as specific articulations and possible grounds for cooperation. Primary data from other practitioners and refugees has been collected via semi-structured interviews or correspondence. In this way expert knowledge and lived experiences have been bridged to complement top-down with bottom-up approaches.

2. Background information
Forced migration, which can be due to or caused by trafficking, needs to be understood not as an isolated phenomenon, but rather as being embedded in the global political economy characterized by asymmetries of power between the Global South and North. Globalization as a “system of selective inclusion and exclusion of specific areas and groups, (...) maintains and exacerbates inequality”, even within zones which lead to conflicts and forced migration.

---

1 However there are intermediate countries and zones of more or less inequality within them.
Their economic and human rights motivations for mobility are interconnected, mirroring the link between migration and social transformation. The increase of TiP, intrinsically related to the demand for cheap labor and restrictive immigration policies in the North, feeds a multi-billion dollar migration industry of illegal and legal operators alike\textsuperscript{2}. Already marginalized groups find their deprived position reinforced, as is the case of women and girls in crisis, who are more at risk than their male counterparts due to their disadvantaged position in society.\textsuperscript{3}

\subsection*{2.1. Definitions}
According to the Protocol to Prevent, Suppress and Punish Trafficking in Persons (also referred to as the Palermo Protocol), TiP is “the recruitment, transportation, transfer, harbouring or receipt of persons, by means of the threat or use of force or other forms of coercion, of abduction, of fraud, of deception, of the abuse of power or of a position of vulnerability or of the giving or receiving of payments or benefits to achieve the consent of a person having control over another person, for the purpose of exploitation.”\textsuperscript{4}

All Internally Displaced People (IDPs), asylum seekers, refugees, stranded or forced migrants are considered potential Victims of Trafficking (VoTs), according to the language established in international instruments. Following critical anthropological thought, this term is to be used with care, recognizing that individuals cannot be reduced to mere passive victims but should be counted as individuals with agency\textsuperscript{5}, individuality and capabilities to react. The complexity of issues that transect individuals’ experiences challenge fixed categories established by international legal instruments.

Crisis are times when one or more structures become unstable, when one or more aspects of a society are compromised, including “manmade and natural disasters which cause widespread destruction of human life, livelihoods and infrastructure”.\textsuperscript{6} In this paper, the term often refers to armed conflicts which result in a series of crises: political, humanitarian, social, political

\textsuperscript{5}Agency is understood in social sciences as the ability and power people have to react as well as to shape structures.
and even environmental. Including a gender perspective means that special consideration is directed to differences among people organized by this socially constructed principle in their status in society, their opportunities, socialization and vulnerability to becoming VoTs. This also includes the differences in their needs and appropriate ways of addressing them. This paper focuses on the situation of women and girls in the Syrian crisis. As much feminist work has taught us, the fate of people is not determined by gender alone, but includes the intersectionality of gender with race, class, sexual orientation, age, and (dis)ability among other social factors. Recently the UN Women head declaration on Sustainable Development Goals and Gender Mainstreaming has put it in terms of the need of gender to be a vertical axis incorporated in all the work of International Organizations, the same holds true for humanitarian work.

2.2. Women, Peace and Security and Trafficking in Persons
The Convention on the Elimination of all Forms of Discrimination Against Women lists the rights of females and calls on States for putting an end to trafficking in women, a clear violation of women’s human rights. The UN Conference on Women of 1995 recognized TiP as an act of violence against women, while the Rome Statute of the International Criminal Court straightforwardly regards it a crime against humanity. These paved the ground for later steps such as UN Security Council resolution 1325 on Women, Peace and Security which pointed out that women are disproportionately affected by armed conflicts, and set a working agenda to empower them. Since then, six additional resolutions have been adopted to further operationalize the issue which prioritized the problem of Women and Girls (W&G) being vulnerable to any kind of sexual and physical violence in armed conflicts, urging states to prevent such incidents and protect victims. Nevertheless, trafficking is not explicitly mentioned in any of them, although the fact that 70% of VoTs are women and should make the interrelation of these two crimes evident.

The birth of the UN Convention against Transnational Organized Crime’s auxiliary, the Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and

10 UN SC, Security Council resolution 1325 [on women and peace and security], S/RES/1325 (GAOR, 2000).
Children expresses the determination of states to tackle trafficking in W&G in unity. The General Assembly resolution 64/293 covers a wide spectrum of actions, such as any form of exploitation that can be linked to trafficking, as well as explicitly condemning trafficking as a serious violation of women’s human rights. Although the intentions are clear, and all efforts are to set up to ensure effective law enforcement, to implement educational programs or to provide medical assistance to VoTs – trafficking in women remains a dominant problem in need of attention.

In the UN system, two stances specifically related to women, violence and trafficking were established: that of the Special Rapporteur on Violence against Women (VaW) in 1994 and the Special Rapporteur on TiP, Especially on W&G in 2004, which further points to the fact that violence against and trafficking in W&G are still chronic concerns. The current Special Rapporteur on TiP has an important role in advocacy and awareness raising and has publicly accentuated that TiP in crises not only as a priority in her mandate but also as a new, overlooked and quickly developing area in trafficking that should be addressed within the wider framework of the humanitarian response.

Trafficking in W&G not only affects the personal security of victims, but is detrimental to the wider society. W&G are often placed at a marginalized and an economically under-privileged position. They are absent from the Women, Peace and Security Agenda. It is generally perceived that in or after W&G need to cover basic needs first, and therefore they cannot take part in conflict prevention or resolution. While true in many cases, it would be important to incorporate gender perspective into decision-making and “peace-making” as soon as possible. Empowering them to become the masters of their own lives is one of the most powerful development tools in the world.

2.3 Facts and figures on trafficking of women and girls

While the clandestine nature of trafficking makes it impossible to obtain comprehensive figures about it, some from the United Nations Office on Drugs and Crime (UNODC), IOM and other IOs are available representing the visible part of TiP. Trafficking is a large business which generates an estimated USD 32 billion annually, representing the third most lucrative international crime industry in the world.\(^\text{19}\) IOM itself relies on UN Inter-Agency Cooperation (IAC) data on humanitarian situations, but to date, no official channel has been set up to document TiP and VoTs yet in crisis. The IOM’s ‘Missing Migrants’ website monitors migrants, many of whom could be potentially victims, but are not counted separately. Between 2010 and 2012, victims with 152 different citizenships were identified in 124 countries across the globe, as well as about 510 trafficking routes.\(^\text{20}\)

Women account for 70% of VoTs, with 49% of them being adult women, and 21% girls. This suggests that women are at a higher risk of being trafficked and disproportionately the victims of it. Even though the share of female VoTs in the region of the Middle East was lower (61%) compared to the rest of the world, the share of adult women was higher (57%). Trafficking for sexual exploitation is still the most frequent form of TiP (53%). Meanwhile, trafficking for forced labor rose steadily to 40% of all cases from 2010-12. This may be due to the adoption of legislative enhancements by many countries to recognize this kind of crime and to ensure that related legislation is implemented. A relatively small number of TiP cases account for organ trafficking.\(^\text{21}\)

The main trafficking flows (31%) from 2010 – 2012 were operated domestically and within the sub-region pointing to the importance of addressing this crime at a regional level.\(^\text{22}\) Although the legislative process is remarkable – 90% of the countries covered by the UNODC have already criminalized TiP – the number of prosecutions remains comparatively low. In addition to various humanitarian accounts, anecdotal references and journalistic investigations point to the recruitment, coercion, and exploitation of people fleeing the Syrian crisis or internally displaced persons.

3. The Syrian crisis: fertile soil for Trafficking in Persons

Conflict has in Syria over the last 50 years, but the current Syrian conflict began as a response to an excessive intervention of the Assad regime against peaceful protests, which escalated

\(^{19}\) ILO, A Global Alliance Against Forced Labour (n 2b) 55-56.
\(^{20}\) UNODC, Global Report on Trafficking in Persons 2014 (n 12) 5
\(^{21}\) Ibid. 10, 82
\(^{22}\) Ibid. 8, 52, 82, 84
into a full-fledged civil war. When the Arab Spring started in March 2011, the Syrian government, as well as diverse opposition groups, committed human rights violations. An attack by ISIS/ISIL on the Free Syrian Army in 2013 marked the exacerbation of the scale of the conflict. Since then, various UN-driven efforts to settle the conflict, including a six point peace plan by former Secretary-General Kofi Annan for the deployment of a UN Supervision Mission in Syria, have failed due to hesitation of regional and global actors, combined with a fast escalation of the conflict. The current situation is extremely complex, involving multiple actors and interests at stake, and changing conditions; a political solution remains to be found. As the effects of the crisis in the region spill over national borders, more actors become involved in it, willingly or not. Moreover, the local conflict is embedded in larger global dynamics of power and dispossession.  

3.1. Effects of the Syrian crisis
Due to the armed conflict, Syria has become one of the top source countries of refugees. Approximately 12 million people (8 million IDPs and 4 million people who fled abroad) are in need of humanitarian assistance. This number has doubled since 2013 – and is still rising. In the region, significant pressure is imposed on Lebanon with the highest concentration of refugees compared to its population (>1 million), followed by Turkey (~1.7 million), Jordan (~600,000), Iraq (~250,000) and Egypt and other North African countries (~130,000). Apart from the growing number of deaths and wounded, W&G disproportionately face distress from various manifestations of violence and make up more than 50% of refugees. Several international agreements emerged following the situation, including UN Security Council Resolution 2139 that focused on increasing access to humanitarian aid and ending detention, kidnapping and torture in Syria. Two further resolutions were adopted with the purpose of easing border crossing for humanitarian convoys and trained staff, and the deployment of monitoring mechanisms.

3.2. Vulnerability factors
Most Middle Eastern and North African (MENA) countries criminalize prostitution and only a few have laws on Counter-Trafficking (CT). Syria has numerous national instruments at its

disposal to fight TiP and Gender-Based Violence (GBV) and to criminalize such acts. The state has ratified most of the related international conventions and treaties, like the Convention on the Elimination of All Forms of Discrimination against Women and the Palermo Protocols. Regarding institutionalized protection for VoTs, a Directorate for CT and a National Committee for CT were erected, complemented by legal capacity building to properly address the challenges of TiP.\textsuperscript{26} For reporting, Syria has established a National Observatory on GBV and shelters for battered women (involving female VoTs) in order to ensure the rights and basic needs of victims of violence.\textsuperscript{27} However, the ongoing crisis brings even more human rights violations as such incidents are left unreported, unpursued and unprevented by the Syrian government.\textsuperscript{28} In short: the more the Syrian crisis deteriorates, the more unstable the rule of law becomes which then enables traffickers to reap the benefits of people’s vulnerability and exacerbating it. Documentation on the problems arising is ongoing and the following is only but a limited account.

3.2.1 Instability
Instability and the absence of rule of law in Syria, chaos ensued and thereby provided fertile soil for GBV against W&G, stranded migrants and other vulnerable groups. As more and more IDPs seek refuge in neighboring countries or embark on the dangerous journey to Europe, they become easy targets for traffickers. The abundance of armament from past conflicts in the region, equipment granted to Iraqi, Pakistani, Libyan and Syrian rebel forces render it impossible for the state to maintain a monopoly of the legitimate use of violence over its territory, a key element in Weber’s influential definition of a state.\textsuperscript{29} Without this, the effectiveness of the Syrian government is limited, as is the case of combatting trafficking from as a state-led action\textsuperscript{30}

3.2.2 Labor trafficking and debt bondage
In Syria, not only the devastated economy, but also the protracted armed conflict forces people to flee in order to save their families, as well as to try to build up their existence elsewhere. The securitization of European borders, justified by appealing to the migration-

\textsuperscript{26}UNHCR, ‘Echoes From Syria Issue 6 - November 2014’<http://www.refworld.org/docid/546ddfe54.html> accessed 9 December 2015
\textsuperscript{29}Max Weber, \textit{Politics as a Vocation} (Lecture) (Munich 1919) 4
security nexus, comes “at the expense of increasing insecurity encountered by border crossing migrants”.\(^{31}\) This also results in higher demand for smugglers, who charge up to USD 10,000 for their smuggling activities, thus leaving many refugees and stranded migrants in debt situations.\(^{32}\) TiP in the region represents a source of income for armed groups -- the dimensions of which remain to be determined, as well as workforce such as cooks, soldiers, suicide bombers, reproductive labor, nurses, sex workers, and trafficking for organs.\(^{33}\) Reports from journalists and human rights activists often include anecdotal references of escapees and others. An ISIS/ISIL leaked price list for Yazidi and Christian W&G is an unambiguous evidence base for trafficking as a source of revenue for armed groups.\(^{34}\)

The unemployment rate of 64.8% among Syrian refugees in Jordan and the fact that women earned 40% less than men in Jordan reflects the bleakness of the situation, in which many search for negative coping solutions such as accepting suspicious job offers that often result in deceit.\(^{35}\) The situation in Lebanon is even worse: with an unemployment rate of 68% among Syrian refugee women in working age and more than 92% of refugees not covered by any form of formal contract.\(^{36}\) Moreover, the fact that every fifth household (inside and outside camps) is headed by single women reflect them in a disproportionately vulnerable position to trafficking, exposing their entire family to risk of being left without protection.\(^{37}\)

### 3.2.3 Sex trafficking, marriages and gender-based violence

Syria is a destination and transit country for trafficking in W&G, though before the crisis it was primarily a destination country for labor exploitation and prostitution\(^{38}\). However, the situation for migrants and the Syrian population has dramatically worsened, exposing them to a higher risk of being trafficked. Several hundred women were abducted by ISIS/ISIL and became their commodity or sex slaves, as well as used for shaming, as a strategy of war.

\(^{36}\) ILO/ROAS, *Assessment of the impact of Syrian Refugees in Lebanon and their employment profile* (ILO, Beirut 2014) 9

\(^{37}\) Protection in Syria is often culturally coded as provided by a male spouse or male relative and is ingrained in a patriarchal social system. Evidently not all people ascribe to it and resist it.

At the same time a new tendency has emerged: more and more women and under-aged girls in Syria’s neighboring countries undergo matrimonies with men external to the camps.\textsuperscript{39} As an example, for some Turkish men, marrying a Syrian refugee girl is an opportunity to obtain a young wife for a lower dowry compared to that for a Turkish woman.\textsuperscript{40} These practices are not the problem per se; it has been reported that these marriages often result in sexual exploitation and/or abandonment of W&G, some of which manage to return to the camp. This kind of practice is blooming on Syria’s borders. Early marriages were also practiced before the crisis to guarantee wives’ security and protection in cases of vulnerability or need, but this was on a much smaller scale and very marginal. Early marriage is now practiced in camps by desperate parents or relatives (female and male) facing socio-economic hardship who see it as the only source of protection for their daughters.\textsuperscript{41} Many agree that it is an accepted, traditional Syrian practice predating the crisis and many did not perceive it as a negative issue. Nonetheless, this practice, evidenced by accounts of thousands of Syrian refugee women and men of other nationalities, has often led to exploitation, prostitution or survival sex and could lead to TiP.\textsuperscript{42} It is crucial to understand that at times women are being forced to undergo matrimony, whereas in others they are actively taking these decisions as survival strategies. It has also been reported that on the way to Europe or other countries, women travelling alone choose to marry men travelling in the same group in order to guarantee their security.\textsuperscript{43} To make matters worse, many if not most of the marriages taken place are not and cannot be registered due to instability in the region or irregular documents, resulting in loss of marital rights for women and rights for children. In some countries, children born out of wedlock, or not recognized by a father, cannot be registered\textsuperscript{44}.

3.2.4 Infants born without registration and access to education?

Additionally, many women leave Syria pregnant and give birth to their children abroad. These babies are rarely registered, rendering them effectively stateless. A birth certificate

provides a child with “visibility” that prevents them from being abused. In Syria, nearly 2 million children were not attending school at the beginning of the new school year in September 2015. It suggests that high periods of school absence put children at higher risks of being recruited by traffickers. Additionally, the existence of unregistered people paves the ground for higher vulnerability to TiP for years to come.

4. A case study: the International Organization for Migration
IOM is the leading international organization for migration and has a close working relation with the UN. The Organization’s work includes addressing the growing operational challenges of migration management, advancing the understanding of migration issues and upholding the human dignity and well-being of migrants. Since 1994, IOM has been working to counter human trafficking -- both through the provision of direct assistance to victims and by assisting states to improve their CT response.

4.1 The Organization’s Response to Crises
IOM has created a Migration Crisis Operational Framework to guide its humanitarian and emergency responses. Within the UN Cluster System, which coordinates the responses of international humanitarian actors, IOM heads the Camp Coordination and Camp Management cluster in natural disasters. The Organization has furthermore created the Displacement Tracking Matrix (DTM), which tracks and monitors population displacement during crises and is being increasingly recognized by the humanitarian community as a key operational tool. Although it has no legal mandate for protection, IOM activities in coordinated humanitarian responses such as the Cluster System contribute to the protection of individuals. Specific thematic coordinating subgroups include Gender-Based Violence Area of Responsibility (SGBV) and the Child Protection Area of Responsibility (SCP) which will be referred to in this paper.

4.2 Regional Response
IOM has developed a regional response to the Syrian crisis in 40 locations across 5 countries: Syria, Turkey, Iraq, Lebanon and Jordan. The number of people assisted rose by 14% between July and October 2015. This fact, together with the increase of humanitarian staff, is clear evidence that IOM’s presence is essential. The Organization also takes the lead on

46 IOM, ‘Regional Response to the Syria Crisis October 2015’ <http://reliefweb.int/sites/reliefweb.int/files/resources/IOM%20Regional%20Response%20to%20Syria%20Crisis%20Oct%202015.pdf> accessed 12 October 2015; See Appendix A
47 Ibid.
logistical aspects linked to the Syrian response such as providing bus transportation to refugees, as well as diverse services.

In 2015, IOM delivered hygiene kits, improved shelter conditions, supported capacity-building in health centers or in the sector of shelter/non-food items assistance, among other activities. Moreover, there are several projects still on the table regarding the vulnerability of women. For instance, the Livelihood Support to Affected Populations with a Focus on Female-headed Households project enables women to attend vocational courses, provides them with grants or tools for starting new businesses and links women with employment markets through employment information centers.

4.3 Trafficking in Crisis Situations
With more than 10 years of anecdotal references and the wish for a formal research on trafficking in crisis since 2012, IOM commissioned a report in 2014 and released a Briefing Document in June 2015. “Trafficking in times of crisis” highlights the interrelatedness of TiP and conflict zones, and the importance of addressing it in this way, and not as a mere side effect. Current humanitarian responses address some aspects of TiP for certain groups of people. Comprehensive CT activities should find a place in the existing Cluster System and be part of the overall protection approach implemented during crisis.\(^{48}\) National legal frameworks, prosecution and national institutions are also needed, however this cannot be addressed within the scope of this paper. Therefore emphasis is placed on which types of assistance can be provided and which actions were taken to provide protection in the Syrian response by humanitarian actors following recent reports from the field.\(^{49}\)

5. Recommendations and specific strategies
Among the key recommendations is the awareness raising among law enforcement staff about trafficking in refugee children, based on Caritas fieldwork in Turkey which found that some Syrian children are used for prostitution in parks in Istanbul.\(^{50}\) Humanitarian efforts are designed to protect and assist people struggling to meet basic needs. Often gender equality and TiP do not come up at the top of this list. However, not considering these at the start of any crisis may allow them to be reproduced which would further worsen the situation. Awareness on gender inequality has gained ground, a revised version of Guidelines for Integrating GBV Interventions in Humanitarian Action were presented in the fall of 2015.\(^{51}\)

---

48 IOM, Briefing Document (n 33)
49 The IOM and Caritas Reports also include recommendations for state and non-state actors..
50 Caritas (n 40)
51 IASC, Guidelines for Integrating GBV Interventions in Humanitarian actions (2015)
Nevertheless, humanitarian practices and agencies are often reluctant to incorporate them fully and consider them part of the initial response. Field experts trying to mainstream CT into humanitarian responses are facing the same challenges. Evidence-based recommendations from IOM and Caritas, however, show that it is precisely the instability of the crisis that allows for trafficking networks, of which women are disproportionately the victims of, to establish, having consequences not only during, but also in post-crisis contexts. Following this, working on CT in the Syrian response effectively expands the protection of people by including VoTs, and diminishes the risk of powerful trafficking networks consolidating. The following four recommendations have been selected from IOM’s Briefing Document because they touch on four internationally recognized pillars of the Trafficking in Persons Protocol, namely, protection, prevention, and promoting international cooperation and partnerships they address specific vulnerability factors identified in this paper, which are often interrelated.

5.1 Including Counter-Trafficking measures into humanitarian responses

A recent IOM Briefing Document shows that armed conflict correlated with heightened risks effectively increased numbers of VoTs. The evidence points to a gap in the protective measures: trafficked people are not provided for within current humanitarian response efforts, such as the Cluster System. The main conclusion and recommendation of the report is that “CT measures should be part of humanitarian responses, to prevent TiP and protect vulnerable and at-risk populations”. Addressing TiP should be seen as a life-saving activity. The IOM report also calls for CT efforts to be incorporated into the Cluster System, and specifically within the Protection Cluster and its areas of responsibility.

As mentioned earlier, much has been done to include women into the Peace and Security agenda, and to address VaW. One way to implement this recommendation with a clear focus on gender would be to articulate the heads of SGBV with the IOM CT response to the Syrian crisis. The SGBV is a very active sub-cluster with weekly email updates and monthly calls, and in a discussion with IOM on incorporating CT into humanitarian settings was very receptive. More precisely, the organizations could consider a) the incorporation of specialized CT (female) staff in humanitarian responses, at least one CT expert, to ensure that the issue is mainstreamed into practical measures. As an alternative to insufficient internal capacity of humanitarian organizations periodical online meetings could be arranged to

52UNODC, International Framework for Action to Implement the Trafficking in Persons Protocol (Vienna, 2009)
53 IOM, Briefing Document (n 33) 12
54 Migrant Assistant Specialist for the MENA Region (n 39a)
consult CT experts elsewhere on how to mainstream the issue and protect victims. Although it is no guarantee that a female CT expert will necessarily be an expert on gender issues, including more female experts might enable these ventures to be more sensitive to W&G’s vulnerabilities, needs, and agency. This is also in line with the larger Women and Peace agenda.

b) to create a CT sub-cluster and integrate it into the humanitarian response as soon as possible.\textsuperscript{55} In the framework of Standard Operational Procedure (SOP) to Facilitate Protection and Assistance to Trafficked Persons, IOM and the United Nations High Commissioner for Refugees (UNHCR) share responsibility and cooperate on the identification, protection and assistance of VoTs.\textsuperscript{56} Although UNHCR leads the humanitarian response in many countries, it does not have the full capacity to respond to trafficking.\textsuperscript{57} This concern is further complicated by the fact that IOM’s CT efforts are underfunded.\textsuperscript{58}

Considering the existence of cooperating agreements among agencies, it is important to c) strengthen this formal cooperation, particularly between IOM and UNHCR and enforce it in existing SOP to Facilitate Protection and Assistance to Trafficked Persons. The already existing IAC fora should incorporate CT and be based on needs to allow a more coherent response to trafficking in women during crises with and to be further reinforced by sub-cluster level groups or task forces for an overarching approach.\textsuperscript{59}

The Inter-Agency Standing Committee-led (IASC) forum coordinates the work of UN and non-UN humanitarian actors with respect to the rights and needs of vulnerable people in crises, and it also applies a gender-sensitive approach.\textsuperscript{60} IACs against trafficking (United Nations Global Initiative to Fight Human Trafficking and the Inter-Agency Coordination Group against Trafficking in Persons) aim at the best possible anti-trafficking multi-stakeholder cooperation to combat TiP and apply a rights and needs-based approach to the

\textsuperscript{55}Ibid., OCHA, ‘Cluster Coordination’ <http://www.unocha.org/what-we-do/coordination-tools/cluster-coordination> accessed 10 June 2015

\textsuperscript{57}Migrant Assistant Specialist for the MENA Region (n 39a)  
\textsuperscript{59}IOM, Briefing Document (n 33) 11  
matter. However, VoTs are usually identified post-hoc and within criminal and immigration processes that fail to ensure their rights and serve their basic needs. To take this even further, GBV and trafficking is often overlooked in crisis responses. From this aspect, GBV and CT working groups should be introduced to the cooperation mechanism.

The mandates of IOM and UNHCR in handling mixed migratory flows were first settled by the Memorandum of Understanding as they realized the emerging need for a systematic cooperation. In each case of beneficiaries (migrants, IDPs, refugees and so on), they agreed on their limitations which often means the recognition of the other’s leadership. The IOM-UNHCR joint forces and expertise should be further reinforced in the existing SOP in order to better posit national efforts against TiP.

It is important to consider trainings for people potentially at risk of TiP which is why d) awareness raising for prevention among refugees and IDPs is specifically recommended. First of all, social workers in humanitarian responses, or other practitioners, should actively identify interests and needs of women, men, and children in order to find a meaningful topic to start group meetings. In combination with these, more attention should be given to CT awareness-raising, particularly on the frequently reported presence of external people to refugees camps coming to either recruit workers or get wives, should take place.

Another specific strategy targeted refugees and IDPs is to e) empower and decrease economic vulnerability of W&G through income-generating trainings or projects such as Work for Cash, or cash assistance (including e-vouchers) with for women. Several IOM CT responses include an element of economic empowerment of VoTs or of women at risk of being trafficked. Ideally, and as the humanitarian sector itself already discusses, this should be addressed in crises as well e.g. to create capacities and foster sustainable livelihoods rather than dependency on the humanitarian aid system. In this regard, CT responses for VoTs or women at risk of being trafficked might be possible to adapt to a humanitarian setting, whereas in other cases the contrary might be true. In Jordan, for example, the current

---

63 Migrant Assistant Specialist for the MENA Region (n 39a)
65 This refers to recruiting beneficiaries themselves to execute specific activities within the project and get economic remuneration.
proportion of refugees to locals translates into a very high unemployment rate. In this case, vocational trainings aimed at a salary job are unrealistic. Instead, small entrepreneurship, micro-credit or Work for Cash initiatives are better suited. In the last few years the World Bank itself, after seeing the success of initiatives such as the Grameen Bank, had studied and learned that people in need (the poor, or in this case refugees, stranded migrants, IDPs, VoTs) actually know what they need and can manage their money. This only partially addresses the lack of economic activities which can lead to negative coping mechanisms of women. Such self-resilience projects enable women to share within society the value added in skills obtained through trainings in the camp. It also speaks to the larger development and humanitarian agendas in Syria, i.e. to restore people’s abilities to be self-sufficient. For instance, IOM Iraq has recognized the challenge of logistics for the elevated numbers of refugees, and responded with One-off (one time) cash transfers for IDPs. In an initial interview with member of a family, irrespective of their gender, the basic criteria of being displaced and not having a shelter is assessed. If qualified this member of the household receives a one-off cash equivalent to $356 which in the area should be enough for the household of four, such as mattresses and blankets. Additionally, having cash or e-vouchers allocates people with the possibility of choosing for themselves, something very important in crowded settings of humanitarian aid where logistical needs often impose a homogenizing and de-humanizing tendency. During vocational trainings or Work for Cash activities, awareness raising trainings mentioned earlier could take place.

5.2. Adapted Trafficking in Persons capacity-building trainings

Humanitarian workers receive specific training, often before going into the field. In the case of emerging crises they are often quick, short and insufficient regarding trafficking. Different humanitarian organizations make emphasis on particular areas, but in general terms there are no explicit linkages made between anti-trafficking and the humanitarian context. This reality confronted with the findings of cases of trafficking in the field raises the question of how to better prepare humanitarian workers to identify and respond to trafficking. IOM’s Briefing Document recommends that “adapted TiP related capacity-building trainings should be delivered to multi-sector stakeholders involved in any humanitarian response and

---

66 Personal communication with IOM Iraq Office (October 2015)
68 See trainings from UNHCR, Mercy Corps, Caritas, Medicins sans Frontières and other Humanitarian organizations’ trainings for humanitarian workers.
that specific attention should be paid to the training of staff positioned at key geographic and strategic points, including border guards, camp managers, peacekeepers, health professionals or other front line workers.”

In fact, IOM has already included a CT module in its Emergency Response Training in June 2015 and by October 2015, one training had already been held. The Organization is currently providing trainings, specifically in Jordan, and induction trainings for CT national response personnel in Iraq. IOM CT experts are also increasingly being deployed as part of the Organization’s crisis response. CT trainings should be analyzed and adapted considering local culture, social, religious, and other elements as well as the particularities of the given armed conflict. These specificities need to be understood by, for example cultural anthropologists, and reconciled, when possible, with international frameworks. This does not mean that in the face of injustices and violations of basic human rights, that cultural logic justifies them. On the contrary, a deep understanding of local sociability permits a better assessment of what is in fact at stake. Is it a forced marriage? Is this trafficking or could it lead to trafficking? How can GBV be identified and what is the best strategy to make interventions in this regard? In this point again, it is suggested that voices of local women be seriously considered. Doing so can substantially help in understanding not only the particularities and effects of the mentioned practices but also be the key players in identifying needs and possible interventions. When grassroots organizations are non-existent, IOM CT efforts and others, should foster the establishment of women’s grass-root movements and work together with them on what the best entry points might be. Some of them could include workshops with women of different generations, of same age groups, as well as sensitizing workshops for men and boys on women’s rights and on the crime and risks of trafficking in specific settings such as camps and on the move seeking refuge.

Specifically, IOM CT trainings already developed for government officials and healthcare practitioners can be a) adapted and incorporated into trainings for humanitarian workers. Including a CT module is a step in this direction. On the flip side, CT experts sent to the Syrian response need to undergo humanitarian trainings as well to understand the complexities and dynamics that played out. The existence of adapted training materials and number of trainings taken place can serve as indicators of steps taken in this direction.

---

69 IOM, *Briefing Document* (n 33) 13
5.3. Rapid assessments to assess the scope, scale, and risks factors to Trafficking in Persons

Effective struggle against TiP requires the rapid assessment of current humanitarian mechanisms and already existing anti-trafficking measures. The IOM Briefing Document suggests “rapid assessments should be undertaken by trained staff at the onset of a crisis to assess the scope, scale and risks factors to TiP. (...) The findings should inform evidence based responses to ensure the protection and assistance of vulnerable populations caught up in crisis.”

Already operating data collection mechanisms, such as the DTM and Information Management and Mine Action Programs (IMMAP) could inform the a) development of a concrete tool, such as a template, designed for gathering and sharing data concerning vulnerability to trafficking, disaggregated by gender.

The DTM was developed by IOM in order to map locations of IDPs. Currently it is only applied in Iraq in the MENA region. The support of the Iraqi Ministry of Migration and Displacement, documented in the Iraq Strategic Response Plan, proves the positive effects of cooperation between the DTM and governmental actors in such mapping activities. One of the categories within the current the DTM classification is gender, a stepping stone for subsequent developments. It is suggested to incorporate indicators relating to TiP into the DTM that could help monitoring potential VoTs. Indicators, such as number of single headed households, financial dependency or number of women settled in unsafe shelters can enable a more specific focus on women in need. Implementing and adapting the DTM mechanism to the situation in the region can serve as an initial step towards this concrete strategy.

Cooperation between IOM and IMMAP is based on the Standby Partnership Program arranged among UN agencies, Office for the Coordination of Humanitarian Affairs, IOM, NGOs and other civil partners which support the humanitarian response actors. The assistance of IMMAP is not limited to analyzing and verifying data, creating and operating databases but includes providing humanitarian staff with mobile applications and multi-sectoral needs assessment in northern Syria and Turkey.

---

70 IOM, Briefing Document (n 33) 12
72 Ibid.
75 Ibid.
IOM’s extensive expertise in managing the DTM in Iraq together with the experience gained through the cooperation with IMMAP are very promising pillars on which the new rapid assessments could be based on. Including indicators such as number of early and forced marriages, number of women marginalized (due to social norms, household duties or GBV survival) or high financial dependency is a possibility to map women vulnerable to trafficking. Implementing an early warning mechanism by observing an increase in the above mentioned indicators could help humanitarian workers to provide specialized services in the right places, and therefore benefit the TiP prevention process. The GBV Information Management System provides important criteria to build on, since GBV is strongly linked to TiP. The adequate and right use of data produced by this tool should be ensured by publishing clear and brief guidelines for using and presenting such confidential information.

Rapid assessments might also be necessary in other locations, as is the case now. Refugees fleeing the Syrian crisis are often confronted with exploitation and TiP on their journey towards Europe. There is suspicion that this industry might flourish in Europe which is why IOM has conducted two rapid assessments in the Balkan route in late 2015.76 While some actors advocate for caution not to be intrusive with exhaustive questioning with people suffering traumatic experiences too early77, others find it urgent to identify VoTs in contact with humanitarian workers as early as possible and suggest that asylum interviews are an excellent setting.78 Clearly more qualitative research is called for to answer the questions of when, where and how to respectfully gather information on trafficking from people seeking protection in crisis settings.

5.4. Safe places for Victims of Trafficking should be identified and secured
The Briefing Document recommends that “safe places for VoTs should be identified and secured throughout the crisis, and when relevant other solutions should be looked at…”79 The strategies developed for this recommendation specifically target women and girls. Organizations working with victims, survivors or other vulnerable populations have pointed to the importance of providing safe spaces for these populations. By doing so, said organizations contribute to the prevention of female victims’ secondary victimization if they take care of

77 Inter-Agency Standing Committee (n 51) 52.
78 Ahmed (n 32)
79 IOM, Briefing Document (n 33) 13
traumatized women and girls with dignity and sensitivity. Some refugee reception centers have special spaces for W&G already, an important actor to mention in this field is the United Nations Population Fund (UNFPA), and this fact is a strength to be built upon and worked on in cooperation with organizational units such as the SGBV. These people with possible additional needs, as W&G, should be informed about the possibility of complementary assistance, for example, through leaflets within the food or medical package received after the basic registration. Specifically, this can be done by identifying existing places, incorporating CT efforts and a) creating new ones if necessary. Safe shelters, should provide immediate security and support to survivors or refugees ought to be designed to provide W&G with a necessary level of privacy. These should, however, be optional, as isolating and labeling often has counterproductive effects -- like stigmatization. The overarching idea of safe spaces includes shelters but is not limited to them. Social work with women in refugee centers indicates the importance of having spaces for women to meet, talk, network, learn and support each other. These spaces need not necessarily be a closed room or a classroom environment, they must be created with close eye-level social work which identifies W&G’s interests or needs and facilitates their initiatives. These could range from self-defense, language courses, storytelling, meet-ups for women and so on. In face of hardship, investing time and energy in other topics, such as talking about the future, education, or arts can help people cope with their realities as well as motivate them. Mazoun Al Meliha, now called the Syrian Malala, is a 16-year-old girl advocating for education who inspires other girls in the Azraq refugee camp to go to school or study wherever they can. Humanitarian practitioners have pointed to the need of diverse staff that can better respond to diverse styles of people and inspire the necessary trust to share their stories and help other potential victims. These spaces should also serve as referral centers for specialized agencies or organizations, and where they are not present should try to supplement as in the concrete case of registering newborns.

82 Ibid.
83 Ster (n 39b); Ahmed (n 32)
84 Ster (n 39b)
To identify and address the needs of women it is important to b) include local women in decision-making process to address the assistance and protection they need. Involving W&G (VoTs and survivors of GBV) into management groups or employing them as staff in general could bring the necessary insight of such vulnerable groups into the process of designing shelters, possible safe spaces and activities there, plus it recognizes the abilities of women and can result in empowerment and economic independence. W&G should have the option to choose in which activities they want to take part, therefore the safe spaces should offer multi-sectoral assistance. A complementary approach is to hold workshops or focus groups, ideally led by grass-root women's organizations, on different topics. Alternatively, and depending on resources, these ventures could support displaced women or female refugees to establish grass root women's organizations of their own building trust among women. Survivors of GBV or TiP could be invited to workshops as inspiration for other women.

Cooperation with women and girls affected by local crises can increase the awareness of humanitarian workers, yet it is also necessary to c) promote awareness-raising among female refugees and IDPs. Some efforts have already been made in this direction. In a refugee camp in Jordan, for example, IOM gathered refugees and camp staff with a common task: to clean-up the surroundings of the camp, and as they were together doing this meaningful goal-oriented action the camp staff spoke about TiP. Another option is targeting staff involved in education or health practitioners or placing safe spaces in facilities like schools or medical centers, where trainings, courses or other skill developing activities can take place. It has been proven successful to link CT agendas with issues that are meaningful to the people in the camps, in this case to women and girls.

The more entry points VoTs have, the more possibilities they have to receive assistance which is why it is important to implement a strategy that d) establishes entry points for VoTs such as hotlines, flyers in communal areas and distributed packages, stickers in communal areas and toilets, and anonymous forms. Moreover, female victims of GBV or VoTs are very often traumatized and socially excluded, or they are isolated due to domestic responsibilities. That is why outreach activities (e.g. home visits and mobile safe spaces) play important roles. Many people in overcrowded camps are glad that someone wants to listen to them, and take their ideas seriously. For instance UNHCR created the Inter-Agency Q&A on Humanitarian

---

86 Migrant Assistant Specialist for the MENA Region (n 39a)
Assistance and Services in Lebanon, which could address questions posed by persons who are searching for help for themselves or for another person in her/his neighborhood.\(^87\)

Given the fact that every fifth household (inside and outside camps) is single headed by women e) special protection for single female-headed households, such as specific shelters, social services and provision of dignity kits can reduce their risk to TiP, among other vulnerabilities. Crisis situations when women were forced to leave their homes unprepared create difficulties for most of them to ensure their basic hygiene needs. Providing dignity kits, which usually contain hygiene supplies such as toothbrushes, toothpaste, shampoo, soap, sanitary pads and underclothes can also link vulnerable women and girls with humanitarian workers, who can provide them with information or additional assistance.\(^88\) That is the reason why IOM should continue with dignity kits distribution and other activities supporting single headed households.\(^89\)

Possible indicators measuring the progress in providing safe spaces and awareness rising activities could be the number of W&G participating in activities in safe spaces and the number of W&G being aware of risks concerning TiP.

6. Conclusions

The materials reviewed provide evidence that the risks of TiP, and actual TiP severely increases in conflict zones. Consequently, addressing TiP in crises is not a tangential issue, rather, it should be considered as a life-saving activity. Additionally, as shown by research in Bosnia and Herzegovina, the peace-keeping missions themselves might be factors that increase risk of TiP and exploitation. TiP feeds a growing industry of criminal activities, including armed groups, although in the case of the Syrian crisis the dimensions remained to be determined. The material suggests that addressing the issue of TiP needs to be seriously considered by humanitarian actors in their work as early as possible. Within the humanitarian sector, there are plenty of existing instances, materials, and mechanisms that with adaptations or in the case of SOPs, a strengthening of their use, could provide protection to female VoTs and work for preventing TiP in general. Moreover, departing from forced migration as linked with global social and economic transformations and the fact that TiP often functions across

borders, we are directed to think of solutions with a transnational, rather than national, perspective. This becomes particularly relevant for the situations taking place in Europe and at its borders. This paper has only hinted at the geo-political dimensions of the crisis, but it is clear that a regional solution to the conflict is needed. State and non-state actors need to step up to guarantee the security of millions of lives now at risk.

For the humanitarian sector, CT needs to be included in responses as early as possible in order to provide protection to VoTs and reduce the risks of TiP. Capacity building trainings are key crystallizing the incorporation of CT. It also complements existing frameworks of cooperation among agencies. Moreover, although recent reports reveal evidence-base for TiP in crisis, Rapid Assessments, to determine the risk, scale and scope of TiP in specific crisis are of the utmost importance in order to be able to plan adequate responses. Finally given the fact that women and girls disproportionately suffer several forms of discrimination and vulnerability, including trafficking, it is clear that this population’s special needs ought to be addressed in a manner that includes them as agents of their own destinies, or role models for other (potential) VoTs.

Additionally, the existing sub-clusters SGBV and SCP might address tangentially, or in the future directly, the issue of trafficking, and if an integrated CT response would be implemented through them, an important protection gap which IOM has pointed out: adult men. Although women and girls systematically suffer discrimination under structural VaW, it is interesting to point out the protection gap for adult men within the Global Protection Cluster. Attention should also be paid to this group of the population. A critical point, however, is the general underfunding of responses to crisis as large as the current one in the region. Although a considerable obstacle, it is of the utmost importance to start including CT strategies and dealing with TiP in conflict and crisis situations, not only as a life-saving action within a protection framework, but also looking into the future as a measure to prevent the establishment of ideal conditions for networks of TiP.

Measures such as those discussed in this paper need to be taken in order to protect VoTs and to prevent their re-trafficking or that of others, an interesting platform for that could be the World Humanitarian Summit 2016, as in the preparations it has already included discussions on trafficking in crisis and there is interest in including it.90 But to address the disproportionate risks that women face in armed conflicts, particularly to the crime of

---

trafficking. It is not only the Women, Peace and Security agenda that needs to transform into accountable principles, but also the basic inequality between men and women in society. Women and girls are disproportionately VoTs not only because the crisis exacerbates risk factors, but rather because even well before the crisis in the region, women and girls did not have the same access to rights, respect and life as their fellow men and boys did. We need not only lay our gaze on the region, it is also the demand for cheap labor or organs in poor and rich countries alike which fuels this industry, in which women’s roles as reproductive workers continue to be replicated with its accompanying lack of material recognition. Finally, what is happening in Syria, spilling over its borders, and reaching Europe is intrinsically tied to the global dynamics of capital and power, its uneven distribution and what Sørensen has called the “migration industry”. In the end, this is not only a humanitarian sector problem, a Syrian or even a regional problem, the crisis is embedded in global dynamics and requires attention in all these fronts. However, women and girls need special attention and they deserve it. They are not passive victims, but social actors with skills, will, and agency.

“Dear decision makers of the world,
...we are the biggest force of positive change you will ever meet. Not just for ourselves, not just for our families, but for our entire communities.
All we ask is that you do all you can to empower and keep us safe, in spaces where we can grow and reach our full potentials.
All we ask is that you consult us, involve us in your planning: we know what we need, we know what’s best for us.
All we ask is that you do your best to protect our right to education: we will pass it on and create the biggest ripple effect you can ever imagine.
Dear world decision-makers, give us a chance: you won’t regret it.
— Girls of this world”  

Acknowledgements

The authors would like to thank Katie Klaffenböck, Counter-Trafficking Focal Point at IOM Austria for her diligence in providing contacts and information as well as for her immense support with her expertise on CT. This paper would have not been possible without her help. We also are very thankful to the Migrant Assistance Specialist for the MENA Region, Sarah Craggs as well as to Agnes Tillinac, Michelle Macchiavelo and Yoko Kimura from the Migrant Assistance department in IOM Headquarters in Geneva. A word of appreciation must also go to all our interview partners and informants for their willingness to contribute, inform and advise, which helped us understand perspectives from different standpoints and stakeholders. شكرا.

<tr>
<td>Include CT measures into humanitarian response to prevent TiP and protect vulnerable population; advocacy should be undertaken through the Cluster System, and specifically the Protection Cluster and its Areas of Responsibility.</td>
<td>Include CT (female) experts in humanitarian response staff or have consultations with them. Humanitarian teams on the ground should have at least one CT expert in order to ensure that the issue is mainstreamed into practical measures. Formally integrate counter-trafficking as a sub-cluster or organizational unit into the cluster system as soon as possible. Strengthen existing IAC and SOPs among agencies, particularly between IOM and UNHCR, to facilitate Protection and Assistance to Trafficked Persons. Awareness raising among refugees and IDPs of trafficking, and common practices of recruitment, or risky behaviors which might lead to TiP in the region/setting. For men and women. Empower and decrease economic vulnerability of women and girls by income generating trainings or projects such as Work for Cash, or cash aid: positive discrimination for women. Include CT awareness-raising in training.</td>
<td>• Number of CT (female) experts staffed in humanitarian response • Geographical distribution of CT (female) experts • Existence of sub-cluster or organizational unit on CT • Update of SOPs • Local IOM /UNHCR staff are aware of SOPs • Number of awareness raising activities • Refugees and IDPs are aware of the risks and common practices • Number of women benefited in proportion to men • Negative coping mechanisms are less frequent</td>
</tr>
